- 24.Double click and Right Click in Selenium with Examples
- 25.JavaScriptExecutor in Selenium WebDriver with Example

***** **Excel Automation** *****

1. Creating Excel file Using Apache POI
2. Reading Excel File using Apache POI
3. Perform Calculation in Excel Sheet using Apache POI
4. Create Excelsheet From Database using Apache POI
5. Apache POI Excel Date format cell
6. Merging the two Excel Sheet into one Excel sheet
7. Write Excel sheet Data into the Postgres Database
8. Create Pivot table using Apache POI

***** **Mail Automation** *****

Perform Below tasks with java and Process studio:

1. Sending Mail using gmail Account
2. Mail Sending with File attachment
3. Reading Mail using gmail Account with specific subject line or email id
4. Download Mail Attachment using gmail Account
5. Extract data from email body store in excel, db

Other Activities

1. Take screenshot while performing ui activities and send it over email.
2. Read password protected excel Handle dynamic column in excel.
3. Read xlsb file convert into xlsx
4. Read xlsx file convert into xlsb file
5. Explore credential vault in AE server
6. Explore dashboard in AE server
7. Encryption and decryption of sensitive data in DB

Task 1:

How to create a GUI in Automation Edge Process Studio to dynamically extract the first 5 iPhone product details from Amazon, and how to perform the same data extraction using Java and Selenium automation code? Website - <https://www.amazon.in>

Task 2:

How to automate the extraction of Top 250 movies data from IMDb and store it in Excel using Automation Edge Process Studio, and how to implement the same solution using Java and Selenium automation code? Website - <https://www.imdb.com/chart/top/>

Task 3:

How to automate multi-page table data extraction from Zaubacorp using Automation Edge Process Studio, and how to implement the same using Java and Selenium automation code? (Extract Data From 2 Pages) Website - <https://www.zaubacorp.com/companies-list>

Task 4:

How to automate email-based ticket creation and auto-response generation using Automation Edge Process Studio, and how to implement the same functionality using Java and Selenium automation code?

Task 5:

Design and implement an automation solution to navigate the Policy bazaar website for 10 cars and extract the top 5 insurance policy details per car

<https://www.policybazaar.com/>

Task 6:

How can we automate the Automation Edge UI using APIs to trigger a workflow and fetch its request and response?

<https://t3.automationedge.com/>

Task 7:

How can we read emails, download attachments, count them, store attachment details in a database, and send a notification email when no attachment is found?

Task 8:

Write a Java program to read all unread emails in an infinite loop and fetch the subject, body, attachment details, attachment count, and received time.

Task 9:

Explain the steps to create a Pivot Table in Process Studio both by using a predefined template and by creating it manually without a template.

Task 10:

How can we automate the OrangeHRM website to log in with credentials, store table data into a database, log out, and then export the data into an Excel file.

<https://www.orangehrm.com/>

Task 11:

How can we go to the CoinGecko website and fetch cryptocurrency data?

<https://www.coingecko.com/>
